

POWER SERIES®

THE LATEST JBL® POWER SERIES® SPEAKER LINE

- The new Power Series® line features all-new textile-dome tweeters with soft roll-off at 23kHz. The woofer performance has been optimized for low-frequency extension and minimum distortion.

MORE SPL

- In addition to better sound quality, the new woofer design offers far higher SPL and better suspension symmetry than the previous generation.

HIGHER EFFICIENCY

- Like our GTO models, these speakers feature reduced impedance of 2 ohms for increased efficiency, while maintaining full compatibility with 4-ohm amplifier output stages, as on standard head units.

TWEETER-LEVEL CONTROL

- Most models feature a switch to reduce the tweeter output level to match personal listening preference, or different mounting locations (not available on the P462).

UNIPIVOT™ (patent no. 6,002,780) ROTATING TWEETER

- 5-1/4" and 6-1/2" coaxial models feature a tweeter that is mounted on a 15-degree angle and can be rotated nearly 360 degrees to point at the listening position for better high-frequency response.

OUTBOARD CROSSOVER NETWORKS

- All Power Series speakers come with external crossovers. The component system networks feature in-line polypropylene caps and low-insertion-loss air-core inductors. The outboard crossovers are integrated into a harness connected to each speaker model for easy installation. Oversized Direct-Connect terminals ensure perfect connectivity for bare speaker wires.

PLUS ONE® HONEYCOMB-LAMINATE (HCL™) WOOFER CONES

- This material combines extreme stiffness with low weight to optimize efficiency and cone distortion.
