

MANUAL CHANGE for Page 4

Please follow the directions below, not #3 on Page 4.

If you will be connecting this subwoofer to a receiver/processor containing a Dolby* digital or D.T.S.** surround technology, please follow the directions below.

1. Connect the subwoofer or LFE output from your receiver/processor to the Center, line-level input as shown below.
2. Set the "Low-Pass" control to the 180Hz setting.

The connection labeled "Direct" is an output that allows you to connect several subwoofers, if your system contains more than one subwoofer.
