

MS-2

Pocket digital processor providing automatic equalization for great car audio from any portable media player

If your music is important enough to carry with you everywhere, you should carry the JBL® MS-2 pocket digital processor. Then instead of connecting your iPod, iPhone or other portable player directly to your car's loudspeaker system – or any other speaker system – you can connect it through the MS-2 and enjoy dramatically improved sonic clarity and stereo imaging. The MS-2 uses DSP (digital signal processing) equalization to optimize system performance for the acoustic characteristics of your speakers, electronics and vehicle interior, and DSP time correction to ensure that all of the speakers' sounds reach your ears simultaneously, creating a coherent, richly detailed soundscape. Small enough to fit in a shirt pocket and simple enough for even a novice to set up in seconds, the MS-2 will transform the listening experience in all your vehicles and even at home (with a third-party six-volt DC power supply, not included). So wherever your portable player goes, your JBL MS-2 should go, too.

TECHNICAL SPECIFICATIONS

Maximum input voltage:	1.3V
Power requirement:	6V DC, 1A
Dimensions (L x W x H):	9" x 5-7/8" x 2-3/8" (230mm x 150mm x 60mm)
Weight:	0.2 lb (96 kg)

Finish:

MS-2

Pocket digital processor providing automatic equalization for great car audio from any portable media player

HIGHLIGHTS

Great car audio from any portable player – The JBL MS-2 uses feedback from a built-in microphone to optimize the signal from your portable player for the best possible sound from your car or home music system. It automatically improves tonal balance, increases bass impact and definition, and maximizes sonic clarity and stereo imaging, all with just a push of the Setup button.

No installation required – The MS-2 works with all music players and all car and home audio systems that include 1/8" (3.5mm) auxiliary-input jacks. Simply connect it between the player and the system.

Small and lightweight – Take the MS-2 with you everywhere, and use it in multiple vehicles or even at home. (It requires a six-volt DC power supply, not included.)

DSP equalization – The MS-2 uses digital signal processing to improve tonal accuracy by automatically compensating for the sonic characteristics of your speakers, electronics and vehicle interior.

DSP time correction – Time correction automatically ensures that the sounds from all speakers arrive at your ears simultaneously, dramatically improving clarity and imaging.

Ultra-simple, one-button setup – To improve your vehicle's sound dramatically, just plug in the MS-2, hold it at eye level, and press the Setup button.

Separate bass, treble, impact and image controls – Individual bass, treble, impact and image controls let you fine-tune the sound to suit particular tracks and your personal preferences. A defeat switch lets you compare system performance with and without the MS-2.

Includes input and output cables – And six-volt DC power supply (to plug into a car's cigarette lighter).
