

# JBL® SB 300

Simple soundbar and wireless subwoofer system for dramatic home theater audio

Many home theater installations require five loudspeakers, a subwoofer and miles of speaker wire. The JBL® SB 300 greatly simplifies that equation. It's a complete home theater sound system comprised of only a single amplified soundbar and a wireless powered subwoofer. Just connect the soundbar directly to your television, DVD player or game console, and plug the subwoofer into any convenient power outlet. You'll enjoy rich, full-spectrum 2.1-channel output that dramatically improves the sound of any TV monitor. Or you can select 3-D surround processing to create a realistic 360-degree soundstage electronically. Either way, the SB 300 delivers true JBL performance with the absolute minimum number of components – and all without a speaker wire in sight.

## FEATURES

## ADVANTAGES

## BENEFITS

|  |  |   |
|--|--|---|
| Complete 2.1-channel sound system                | Everything you need to turn your TV into a home theater is included                                      | Nothing more to buy                         |
| Engineered as a system                           | Delivers better overall performance than stand-alone components  | More realistic movie and music experiences  |
| Front soundbar                                   | Left and right speakers, amplifiers and controls are integrated into one sleek unit                      | Saves space; simplifies setup and operation |
| Wireless powered subwoofer                       | An 8-inch (200mm), 100-watt subwoofer for deep, satisfying bass without speaker wires                    | Easy installation                           |
| IR remote  | A credit-card-sized remote controls system power, volume and audio inputs                                | Ease of use                                 |
| Down-firing bass reflex subwoofer enclosure      | Puts your floor to work, increasing bass output and minimizing unwanted interaction with walls           | Realistic, high-impact bass                 |
| Magnetically shielded soundbar and subwoofer     | Eliminates video interference near your TV monitor   | Increased placement flexibility             |
| 3-D surround processing                          | Creates a realistic surround sound experience effective for both movies and music                        | Multichannel sound from two-channel sources |
| Dual-position EQ                                 | Optimizes soundbar performance for tabletop or wall-mounting   | Improves overall bass performance           |
| Dual input connections                           | Connect to both your TV and DVD player or other audio source at the same time                            | Eliminates cable swapping                   |
| Subwoofer volume, crossover and phase controls   | Optimize bass response for your listening environment and adjust for personal taste and program material | Your bass, your way                         |
| Auto power on                                    | System powers on automatically with TV, DVD or other audio input   | Simplifies operation                        |
| Wireless code switches on soundbar and subwoofer | Pairs devices for RF operation   | Avoids interference with other RF devices   |
