

JBL® MS-WBC

Wireless Bass Control

Designed for use with JBL® MS Series amplifiers, the MS-WBC wireless bass control lets you precisely raise or lower the bass output of your car audio system – without altering the character of the sound. Conventional bass controls work by changing the system’s crossover frequency, which affects overall frequency response (see Figure 1). But the MS-WBC lets you dial bass output up or down by up to 10dB without changing frequency response (see Figure 2). An RF remote that installs in minutes with just a screwdriver, the MS-WBC works with all the amps in your system, letting you set the perfect amount of bass for any recording or source.

Highlights

- >> Boosts/cuts bass without changing the character of the sound
- >> Works with multiple MS amplifiers
- >> Simple wireless installation

Key Specifications

- >> Control type: Proprietary slope-adjusting shelf
- >> Adjustment range: ± 10 dB boost or cut
- >> Boost/cut frequency: 60Hz low-pass shelf (20Hz – 60Hz)
- >> Compatible amplifiers: JBL MS-A1004, JBL MS-A5001
- >> Battery type: CR2025 (included)

Key Features

- >> Long battery life
- >> May be hardwired to car battery
